

REQUESTING A GIS REPORT

The IAFF Fire & EMS Operations Department provides customized reports for Locals based on data, including demographics, computer-aided dispatch (CAD) records, and historical traffic patterns. Our analysis assesses department capabilities and compares them to industry standards.

We then make data-informed recommendations to improve service to communities and move departments toward compliance with industry standards. Our products include:

- Standards of Cover/GIS Analysis
- Workload Analysis
- EMS Integration
- Risk Assessment
- Resource Allocation
- Station Location Recommendation
- Strategic Plan
- Consultant Report Review and/or Rebuttal

These products can assist your department with vital decisions, including determining appropriate staffing, resource allocation, implementing EMS transport, sitting stations in the best locations to meet demand, and assessing community risk.

With our data-informed approach, we make objective recommendations that will improve your Local's way of working and aid in negotiations.

REQUEST A REPORT

Consider your Local's needs:

- Are you experiencing layoffs, station or apparatus closures, or brownouts?
- Does your jurisdiction plan to add a station but need to know where to locate it?
- Have you performed a community risk assessment?
- Do you have contract negotiations upcoming?

All of these (and more!) are reasons to request a report from the IAFF. There is no additional cost to you! Have your Local president reach out to your IAFF District Vice President. Advanced notice required.
