January Dedicated as Fire Fighter Cancer Awareness Month

Groups set aside entire month to educate fire fighters about preventing occupational cancer.

Research shows that fire fighters are more likely to be diagnosed with certain types of cancer than the general public – a trend that two fire service organizations hope to reduce. The International Association of Fire Fighters (IAFF) and the Firefighter Cancer Support Network (FCSN) will partner to deliver targeted education about best practices and resources to reduce the impact of cancer on fire fighters this January as they create Fire Fighter Cancer Awareness Month.

The month-long campaign will include Safety Stand Downs, training briefs meant to highlight the effects of occupational cancer and focus on topics of prevention and mitigation. The topics of these briefs include: the scope of the cancer problem, best practices on prevention, leadership tactics to help prevention and skills to help survivors of occupational cancer.

The topics will be reinforced with online resources such as daily training information and infographics that promote the program and underline the importance of the issue on social media and podcasts addressing the important issues of prevention and documentation of exposures to carcinogens.

"The health and well-being of firefighters is our top priority. There needs to be further education, more assistance, and resources for firefighters when it comes to navigating the overwhelming gravity of a cancer diagnoses," says FCSN CEO Bryan Frieders. "In addition to our badge-to-badge support, the FCSN is committed to providing resources, education and training to reduce the risk of occupational cancer for all fire and EMS professionals. This partnership will undoubtedly save lives and increase awareness."
“Our members are being diagnosed with cancers as a result of on-the-job exposures. We have had the sad duty of adding far too many of their names to the walls of our Fallen Fire Fighter Memorial,” said IAFF General President Harold Schaitberger. “That is why we have partnered with the FCSN to create the Fire Fighter Cancer Awareness month – to give our hard-working members the most up-to-date guidance and data that will allow them the opportunity to enjoy a long, safe career and a healthy retirement.”

About the Firefighter Cancer Support Network
Firefighter Cancer Support Network (FCSN) provides critical assistance for career or volunteer, active or retired firefighters, emergency medical service providers, and their immediate family members who have been diagnosed with cancer. They deliver valuable post-diagnosis resources followed by unique badge to badge, one-on-one mentorship from one of their 220 fire-service mentors who have first-hand knowledge about battling cancer. They share their survivor’s journey about their particular types of cancer, their own experiences with testing and treatments, and offer valuable insight into the recovery process. About the International Association of Firefighters
The International Association of Fire Fighters (IAFF) is the driving force behind nearly every advance in the fire and emergency services in the 21st century. With headquarters in Washington, DC, and Ottawa, Ontario, the IAFF represents more than 323,000 full-time professional fire fighters and paramedics in more than 3,500 affiliates. IAFF members protect more than 85 percent of the population in communities throughout the United States and Canada. The IAFF is also one of the most active lobbying organizations in Washington, DC. The IAFF Political Action Committee, FIREPAC, is among the top one-half of one percent of all federally registered PACs in the country. [www.iaff.org](http://www.iaff.org)
